

VARNIBLUE FORTE 115-135

Strippable plate for in line coating with long run UV and water base varnishes

Varnibblue FORTE is a stripping plate designed for in line coating with sheet fed offset presses.

The plate is reusable many times and is suitable for long run UV and water base coatings.

The combination of Varnibblue FORTE plate with compressible underlayer Varnicomp SR enhances the coating quality results, ensuring a uniform and consistent coating transfer over a variety of substrates.

Using UV coatings, at the end of every print run, it is highly recommended to clean the plate surface with a wash in order to remove all residuals of coating, then rinse with water and dry.

Features	Benefits
Microground Rubber Surface	<p>Excellent coating transfer with UV and WB coatings. Surface finishing ensures high quality results also with special coatings such as matt, soft touch.</p> <p>Easy cutting both manually and with CAD plotter.</p> <p>Sharp and clean cut. Strong resistance to swelling action by UV coating and washes.</p> <p>Easy stripping and consistent peel strength from batch to batch.</p>
Polyester Base	<p>Dimensional stability with perfect register maintained over long and repeated runs.</p>

Technical Data	
Thickness	1.15 ± 0.05mm / 1.35 ± 0.05mm
Total hardness (Shore A)	75°
Thickness of stripping layer	0.8mm for 1.15mm / 1.0mm for 1.35mm
Polyester layer thickness	0.35mm
Top surface roughness (Ra)	0.8 ± 0.15µm
